

- 1) Broadcast
- 2) Metropolitan Area Network (MAN)
- 3) Protokol
- 4) Fragmentation & Re-Assembly
- 5) Encapsulation
- 6) Physical layer
- 7) Amplitudo
- 8) Transmisi Serial
- 9) Bit per second (bps)
- 10) Detector
- 11) STX
- 12) Modulasi
- 13) layanan acknowledge connection-oriented
- 14) Pure ALOHA
- 15) Subnetting
- 16) Subnet
- 17) Router

5)

③

- 1) - Terdapat dua buah komputer yang memiliki kartu jaringan
- Media transmisi kabel/nirkabel
- Terdapat perangkat lunak sistem operasi jaringan.
- 2) - Jaringan tertentu hanya dapat menerima paket dengan panjang tertentu.
- Jenis flow control tertentu akan efisien jika berita dibagi dlm paket2 kecil
- Agar pengiriman jaringan tidak didominasi oleh user tertentu
- Paket data yg kecil hanya perlu buffer kecil pada bagian penerima
- 3) Sumber cahaya : menerima signal listrik myd cahaya
Media transmisi : mentransmisikan cahaya
Detektor : mengubah cahaya myd pulsa listrik.
- 4) a. kelas B
b. kelas A
c. kelas C
d. kelas B

- 6) a. 192.168.100.0/28 (C) ~~24~~
28
11111111. 11111111. 11111111. 11110000
⇒ 255. 255. 255. 240

a) Jumlah Host ~~per subnet~~ Subnet

$$2^x = 2^4 = 16$$

b) Jumlah Host per subnet

$$2^y - 2 = 2^4 - 2 = 14$$

c) Block Subnet

$$256 - 240 = 16 \Rightarrow 0, 16, 32, 48$$

d) Alamat Host yg Valid

Subnet	192.168.100.0	192.168.100.16	192.168.100.32
Host I	192.168.100.1	192.168.100.17	192.168.100.33
Host Terakhir	192.168.100.14	192.168.100.30	192.168.100.46
Broadcast	192.168.100.15	192.168.100.31	192.168.100.47

dst --

6) b. ~~172.18~~

172.18.10.200/22 \Rightarrow kelas B

11111111.11111111.11111100.0000

\Rightarrow 255.255.252.0

a) Jumlah Subnet

$$2^x = 2^6 = 64$$

b) Jumlah Host / Subnet

$$2^y - 2 = 2^6 - 2 = 62$$

c) Blok Subnet

$$256 - 252 = 4$$

d) Alamat Host yg Valid

Subnet	172.18.0.0	172.18.4.0	172.18.8.0
Host pertama	172.18.0.1	172.18.4.1	172.18.8.1
Host kedua terakhir	172.18.3.254	172.18.7.254	172.18.11.254
Broadcast	172.18.3.255	172.18.7.255	172.18.11.255

... dst.

c. 10.20.30.40/11

11111111.11000000.00000000.00000000

\Rightarrow 256.224.0.0

a) Jumlah Subnet

$$2^x = 2^3 = 8$$

b) Jumlah Host / subnet

$$2^y - 2 = 2^{21} - 2 = 2097.150$$

c) Block Subnet

$$256 - 224 = 32, 0, 32, 64, 96, 128, 160, 192, 224$$

d) Alamat yg valid

Subnet	10.0.0.0	10.32.0.0	10.64.0.0
Host pertama	10.0.0.1	10.32.0.1	10.64.0.1
Host terakhir	10.31.255.254	10.63.255.254	10.95.255.254
Broadcast	10.31.255.255	10.63.255.255	10.95.255.255

... dst.
